PC POWER MANAGEMENT

Are your computers getting enough sleep? OG&E's PC Power Management (PCPM) software helps you reboot your organization's energy use by automatically putting idle computers into the lowest possible power state.

Whether you install on only a few computers or thousands, the power management settings can be easily set and adjusted from one terminal. What's more, PCPM will calculate each computer's energy use and report the data back to administrative staff—so you'll know exactly how much you're saving.

Computing the Savings

The energy savings you'll achieve combined with generous incentives from OG&E mean PCPM could pay for itself in as little as one month. Take a look at these real-world results to see how PCPM gives you the power to lower your organization's energy costs:

Savings Example A

	Price of Software	OG&E Incentive	Final Cost	Annual kWh Savings	Annual Monetary Savings	Est. Payback Period
Per Computer	\$10	\$10	\$0	324	\$25.92	0 months
365 Computers	\$3,650	\$3,650	\$0	118,260	\$9,460.80	0 months

Savings Example B

	Price of Software	OG&E Incentive	Final Cost	Annual kWh Savings	Annual Monetary Savings	Est. Payback Period
Per Computer	\$10	\$10	\$0	398	\$31.84	0 months
2000 Computers	\$20,000	\$20,000	\$0	796,000	\$63,680	0 months
